Configuring Safari

Start by opening Windows Explorer or My Computer and navigating to the CTI client's program folder; it is usually in the 'Program Files' folder on the C: drive. Also open Safari and go to the extensions page (Click on the cog and select 'Safari Extensions'). Sit the two windows side-by-side.

Click and hold the mouse button down on the 'SafariDialExtension.safariextz' file in Windows Explorer/My Computer and drag the file over to the Safari window, then let go of the mouse button to drop the file into Safari; this installs a version of the dialing add-on in Safari. If the 'SafariDialExtension.safariextz' file is not present in the CTI client program folder, you need to update the CTI client.

A window will pop up asking you if you are sure you want to install the software, click 'Install' to proceed with the installation. The installation shouldn't take very long.

Well done! That is the end of the Safari configuration process.

Note: ucplus for MAC will install the Safari plugin automatically when first installed. To install manually go to the configuration menu and on the versions option press the "Re-Install Safari Plugin".

So the real question, since you have the current version of 11, is does it work? If it's not behaving properly, then an update is in order.

the last version I have installed is #11 0 14 Please advise what version you two are running.

0 14 - I need a 'direct link' to the proper Adobe updates - al I see is a bunch of freebie artistic products.. Note that if you instead select having a different OS, you can choose either Adobe Reader 15 or Adobe Reader 11.. Adobe Acrobat Reader DC software is the free global standard for reliably viewing, printing, and commenting on PDF documents.. 0 14 Please advise what version you two are running You should be aware that the version you have running is the current and probably last version of what we traditionally consider to be Adobe Reader.. I'm using Reader 10 on my production machine and, especially after this experiment, intended to keep it that way.. Then, installing Reader 15 changed the interface substantially, and trying some features required an Adobe account, which I'm not about to set up.. As an experiment, I tried installing first Reader 11 in El Capitan and found that it seemed to work properly.. But if it's working properly, unless you want to get involved with Adobe's move to the cloud and some of Reader's features being dependent on it, I'd suggest leaving Reader as is.. I have Adobe Acrobat Reader DC version 15 010 20059 Caninemiss wrote the last version I have installed is #11. e828bfe731 [Polderbits Sound Recorder Download Mac](#)
